

SALJOL Carbon Rollator

...forever young

- **Two sizes** 54 cm and 62 cm seat height
- **Gearshift** for safe downhill driving
- **Reflectors**, for more safety in the dark
- **bag** with many functions
- **Shock absorbing**, thanks to soft all-terrain tyres
- soft, **cork** handles
- a wide range of **accessories**

The SALJOL - Carbon Rollator

Design matches safety - small, light and intelligent!

A medical aide that doesn't look like one. Our SALJOL Carbon Rollator has an impressive dynamic shape of the 50s with sophisticated functions. **Cork handles** ensure a firm and secure grip and a elegant appearance. All your belongings can be stored in the functional, **rainproof bag** which can be removed by using only one hand. Driving downhill is no longer a problem by **changing gear using the foot pedal** (some call it the friction brake).

The SALJOL Carbon Rollator folds down to 22 cm and weighs only 5.9 kg.

One design - three trendy colours, back to the 50ties

Technical data:	CR 54	CR 62
max. user weight	150 kg	150 kg
max. load of the bag	5 kg	5 kg
Width: open	62 cm	62 cm
Width: closed	22 cm	22 cm
seat width	45 cm	46 cm
seat height	54 cm	62 cm
max. support height	88 cm	103 cm
min. Support height	76 cm	81 cm

Two sizes for maximum comfort

The Carbon Rollator is available in two different versions. The CR 54 with a lower seat height of 54 cm, which is particularly suitable for smaller people so that you can sit and walk safely. The handles can be adjusted in five steps having a supportive height of 88 cm.

The CR 62 (seat height 62 cm) is the better choice for medium to tall people. The handles can be individually adjusted to the user's size in nine steps having a supportive height of 103 cm.

To adjust the height of the handles you only need to turn two screws.

One of the safest Rollators in the world!

You are always clearly visible. Even in the dark. Thanks to four reflectors at the back of the rollator and rotating spoke reflectors on the wheels, as recommended by the police and traffic officers.

Each wheel is equipped with spoke reflectors.

The easily accessible **hand-brakes** make fast and safe braking possible. The brake is activated when the brake handles are pulled slightly upwards.

To stand safely in the rollator, keep the brake handles pulled and release the brake to walk. The **parking brake** is activated by pressing the brakes downwards, which prevents rolling away on uneven surfaces.

The appropriate rolling resistance is set via the friction brake, which we call gear shifting by using the foot pedal.

A well thought out product with many advantages

The **bag** can be loaded up to 5 kg. You can remove it with one hand. A magnetic fastener makes it very easy to open and close. Very chic and functional, with a **rainproof mobile phone case** and light-coloured lining, so that stowed objects can be found more easily. Discreet reflective surfaces for better visibility in the dark, a net for drinks or an umbrella on the left and right and two loops for hanging a **front or foot area lamp** round off the rollator.

all-terrain tyres with side profile

Ideal for driving on all surfaces

The all-terrain tyres with side profile, are excellent shock absorbers. The carbon rollator can easily and safely ride over pebbles and cobblestones. It has outstanding grip and efficient braking ability even on smooth surfaces.

gearshift

The gearshift is now standard

The gear shifting on the rear wheels, enables reduced walking speed by simply setting the individual rolling resistance. This ensures that you get the support you need to safely walk down every hill and thereby avoiding that the rollator unintentionally runs away.

bottle pocket

mobile case

3 inner pockets

safely walk down any hill

Cork - a renewable raw material

Cork is a natural product, light and very elastic. It's pleasant to touch and its non-slip structure is especially suitable for handles, for example in sports equipment or household appliances.

Features:

- UV-resistant
- resistant to moisture and swe
- non-slip
- natural cork optic
- hard-wearing

Useful accessories for the Carbon Rollator

Magnetic walking stick holder set

This unique walking stick holder holds your walking aid firmly on the rollator.

With one magnetic disk on the rollator handle and the other one on your walking aid. Simple and quickly attachable and ready to go! Either on the left- or the right-side.

Uncomplicated because your walking aid sort of finds its own position. With a slight jerk and it can be released safely without falling out of the supporting basket.

Simple to operate, easy to use!

Standard walking stick holder

Do you need a second walking stick holder for your Carbon Rollator?

If so, then the walking stick holder can easily be attached to the frame and the height adjustment rod of the rollator. Firstly click the basket onto the inner rod below and turn it outwards. Fix the basket with the supplied screws. Next, fasten the clamp to the height adjustment of the rollator (below the handles) using the other two screws. Alternatively, you can also use the magnetic disk. (See magnetic walking stick holder set).

Adjusting the correct handle height: Allow your arms to hang loosely. The handles should be adjusted to about wrist height.

Overcoming curbs and thresholds: Push diagonally up to smaller obstacles and then push the front wheels over the curb one at a time.

Your SALJOL Carbon Rollator is equipped with a tilting aid, small step levers on the rear wheels. Simply tread on one with your free-foot.

If the curb is still too high, it is best to find a place where the edge of the sidewalk is lowered.

Useful accessories for the Carbon Rollator

LED Lamp

With the bright LED lamp you are well visible in the dark. In addition, the lamp illuminates your path and helps you to identify obstacles. With a second LED lamp you can illuminate the foot area, so you can also see smaller obstacles and unpleasant things like dog droppings.

Flip up the hook from the holder on the back of the lamp and insert the hook into the loop provided on the rollator bag.

You can switch the lamp on at the bottom. The LED lamp is battery operated and can also be used universally in many other situations.

Foldable Umbrella

Stay dry with the umbrella in rainy weather. The umbrella has an additional advantage that it can be attached to your rollator on the left- or on the right-side enabling you to keep both hands on the handles of your rollator and at the same time providing you with the best possible protection.

Attaching and adjusting is very easy.

You can determine the position and inclination of the umbrella with two pivots.

When the weather is fine, you simply fold it away.

The correct posture when walking: Walk in the rollator and not behind it! Do not push it in front of you like a shopping cart, as this could cause you to fall. You can prevent back pain by keeping the gap between your body and rollator as small as possible.

Folding and unfolding: Premium rollators are folded lengthwise. Simply pull the unlocking strap on the seat upwards, press the carrying handles together and fix the red button with a click.

Useful accessories for the Carbon Rollator

Bag

The bag can easily be opened and closed using only one hand thanks to the magnetic fastener. There is a net on the left and right sides, e.g. for bottles. The bag is easy to attach and can be removed using one hand. The lightly-coloured inner lining and the three separate compartments make it easier for you to find your possessions.

Rollator bell

You can draw attention to yourself in public by ringing a bell on your rollator. Simply attach with the screw and ring. The bell can be mounted on the left- or on the right-side.

Tips for handling

Sitting on the rollator: Turn yourself around between the handles of the rollator so that you are standing with your back to the seat. Rest your hands on the handles of the rollator, bend your upper body forward and sit down slowly. If your rollator has a back strap, you will not only sit more comfortably but it will prevent you from-tilting backwards.

Useful accessories for the Carbon Rollator

An adjustable back strap

A back strap is very comfortable if you use your rollator a lot as a seat. You can lean on it comfortably and it will prevent you from tilting over backwards.

Fasten the back strap to the inside of the handles of the rollator using the supplied screws and a spanner. The adjustability of the back strap allows you to find the ideal position. Is also suitable for tall people.

The padded seat

The padded seat improves your support when sitting on the rollator. You sit upright, it is safe as well as very comfortable. Simply place the seat on the seat net of the rollator and secure it by pressing lightly until the clamps grip under the bars. Place it in the rollator bag for transport.

Tray

Many things can be easily transported with the help of the tray. This turns your rollator into a serving trolley. Place the tray on the seat of the rollator with the wide side facing forward and make sure that the recesses are on the left and right of the bars. An anti-slip mat increases safety.
